

Liberty Head Nickels

The V Nickel, also known as the Liberty Head Nickel, was a five-cent coin minted by the United States from 1883 to 1913. It is called the V Nickel because of the Roman numeral "V" on the reverse side, which stands for 5. These coins are highly collectible today and their value can vary greatly depending on their condition and rarity. For instance, the 1885 V Nickel is one of the most sought-after by collectors, and even in worn condition, it can be quite valuable. Collectors often assess the value of these coins by examining factors such as the date, mintmark, and condition, which can be graded from good to mint state. The V Nickel represents an important part of American numismatic history, as it was one of the last coins to feature Lady Liberty before the introduction of the Buffalo Nickel. Collecting these coins can be a fascinating hobby, with the potential for some pieces to appreciate in value over time. Coin enthusiasts often refer to price guides and consult with numismatic experts to determine the current market value of their V Nickels.
